## **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 4 and 13, the prior arts fail to teach or fairly suggest a method (or an apparatus) for use with a node of communications network, the method for setting up a connection in response to a request comprising:

determining a bit-vector corresponding to the interface number,  
determining a first available part to the link, and  
marking the bit vector such that bits corresponding to the determined first available part of the link are marked as unavailable, within the structure of the independent claims 4 and 13.

Regarding claims 22 and 27, the prior arts fail to teach or fairly suggest a method (or an apparatus) for use in call signaling protocol, the method for use by a node of a communications network to determine a link of a connection comprising:

only if it is determined that the determined link has sufficient communication resources to satisfy the call, then allocating communication resources of the link to the call, wherein the link is a multiplexed link having channels, and wherein allocation communication resources of the link to the call includes determining available channels of the link unit the sum of capacity of the determined available channel is enough to satisfy the call, within the structure of the independent claims 22 and 27.
